Introduction

This is the planning report regarding the upcoming individual deliverable for the subject of DP2

Table depicting time and costs over the sprint

Task	Role	Time	Cost
Adjustments on the project for the control check	Developer	40 min	10 €
Packing of the project	Developer	10 min	2,5 €
Upload the project on the platform	Manager	5 min	2,08 €

As it is expected 45 minutes of work, and my pc having costed 1320€ the amortization price in 3 years would yield a 1.21 € per day and in the 45 minutes that this will probably take it is a cost of about 0.04€ for the duration of this tasks and it generated about 14.58€, giving us a benefit of 14.56€ in 50 mins as developer and 5 as manager

Conclusions

As this is an individual delivery that only counts the time spent on the lab for this final deliverable the times and costs are extremely low compared to those depicted on the previous sprints. Aside from that, this document is done.
